MiFID II Reference Data

The MiFID II / MiFIR regulatory framework has been introduced to bring greater transparency, safety and more resilience to the financial markets. The regulation brings enormous complexity for firms throughout the industry in terms of generating, collecting and processing financial data.

As a leading global provider of reference data and with a long history with regulations, we have developed complete data sets relevant for Investor Protection and Transparency, Transaction and Reference Data Reporting obligations stated in the various regulatory technical standards (RTS).

SIX provides more than 530 data fields - discover a flavor of our offering below.

to an ESG index, rating, or sustainability KPI), causing it to fail the non-complex criteria in MiFID II Article 25(4)(a) and fall within ESMA Guidelines on complex debt instruments and structured deposits (ESMA/2015/1787). The ESG or sustainability theme does not affect the complexity determination; complexity is governed solely by the payoff structure and embedded derivative. Practical consequences include a mandatory appropriateness assessment, prohibition on execution-only sale to retail clients, and application of product governance and target-market rules. Sustainability disclosures are governed separately by SFDR and the EU Taxonomy Regulation.

Why this ships at *SIX*.

01

Runs in your environment, on your stack.

Works with your existing documents and systems. Capture only with consent.

02

Adoption isn't top-down.

Experts get visible credit — their name on every insight. A personal asset they control.

03

Privacy is a hardline.

Phase one is internal, making the team team faster — the lowest-risk, highest-trust surface in a regulated business.
